

Explanation of HTML Tags with Attributes

<a> Tag

Used to define a hyperlink.

- *href*: Specifies the URL of the page the link goes to.
- *target*: Specifies where to open the linked document.
- *title*: Specifies extra information about the link (tooltip).

Example:

```
<a href="https://example.com" target="_blank" title="Go to Example">Visit  
Example</a>
```

<body> Tag

Defines the main content of an HTML document.

- *bgcolor*: Sets the background color of the page.
- *text*: Sets the color of the text.
- *link*: Sets the color of hyperlinks.

Example:

```
<body bgcolor="#f0f0f0" text="#333333" link="#0000ff">  
    Welcome to my website!  
</body>
```

<table> Tag

Used to create a table in HTML.

- *border*: Specifies the width of the border.
- *cellspacing*: Defines the space between cells.
- *cellpadding*: Sets the space between content and border.
- *width*: Defines the width of the table.
- *height*: Defines the height of the table.

- *align*: Aligns the table on the page (deprecated in HTML5).

- *bgcolor*: Sets the background color of the table (deprecated in HTML5).

Example:

```
<table border="1" cellspacing="5" cellpadding="10" width="100%" height="200"
align="center" bgcolor="#f2f2f2">
  <tr>
    <td>Cell 1</td>
    <td>Cell 2</td>
  </tr>
</table>
```
